Did you find the assignment brief clear?

The brief is fairly clear, although it mentions: "Use the Progression Plan spreadsheet " to which
I couldn't find any example of or link to. I also missed information about the timeline
we were setting this up for, so that might be good to include later on to avoid confusion. Other than that, the task is pretty
straightforward.

How did you approach this assignment?

I started this assignment reading through all the material, watching the video, going through the lesson tasks, however, to me I
didn't feel like it was enough, and the material is hard reading through. I have in addition watched tons of Youtube videos
surrounding the subject, then took notes based off both my learning material and the videos I've watched.
The notes I have made is a really good help as they are in my language and not necessarily
filled with complicated words and explanations.
I very much enjoyed planning a project, although I do not think I have experience
enough to predict the time spent on the various tasks. Having identified areas
of improvements from the first projects, I've allocated additional time to the stages I know are my weakness(Figma)
so that I don't have the time pressure hanging over my head, which would lead to mistakes being made and
possibly ruin the workflow. I like the idea of dividing a project into small
manageable tasks, so that you follow a plan with set times/dates, instead of jumping back and forth through pages.
For setting up my Kanban board I have researched how other people do it, trying to grasp the time spent on individual tasks,
combined with my own limitations and strengths.

Additional Comments

https://github.com/users/miastubb/projects/5/views/1

In my issues tab, the issues does not range from 1,2,3 etc, because I deleted some along the way instead of changing them. It's
annoying when I look at my roadmap, however they do make sense to me mostly
because of the dates I have set, and me knowing what I want to start with.
